

School of AI & Data for Business & Society

Paris Region · Nice Côte d'Azur

Grande École Program — PGE5

Specialization: Artificial Intelligence & Data Science

FINAL PROJECT REPORT (FPR)

Final year project title

Subtitle or application domain

Student: First Name LAST NAME

Host company: Company name

Internship Supervisor: First Name LAST NAME (Position, Company)

Academic tutor: First name LAST NAME (aivancity)

Academic year : 2025–2026

Submission date: DD Month YYYY

Acknowledgement

Please express your gratitude here to your internship supervisor, academic tutor, host team, family, and everyone who contributed to this project. This section is personal and should not exceed one page.

Summary

Abstract in French (250–300 words). In a few sentences, present the context, the research question, the methodology, the main results, and the conclusions. This summary should allow a non-specialist reader to grasp the essential points of the work.

Keywords: *word1, word2, word3, word4, word5*

Abstract

English abstract (250–300 words). Present the context, research question, methodology, main findings and conclusions. The abstract must be self-contained and intelligible without reading the full report.

Keywords: *keyword1, keyword2, keyword3, keyword4, keyword5*

List of figures

Instruction: Update this field automatically in Word (right click → Update Field) after inserting all figures with their captions via References > Insert Caption.

[Insert list of figures here – Word auto-field]

List of tables

[Insert list of tables here – Word auto-field]

List of abbreviations and acronyms

Abbreviation	Meaning
AI / AI	Artificial Intelligence
ML	Machine Learning
DL	Deep Learning
NLP	Natural Language Processing
API	Application Programming Interface
KPI	Key Performance Indicator
PFE	Final Year Project
PGE	Grande École Program

1. Introduction

Recommended length: 3–5 pages. The introduction presents the general context, the problem, the objectives and the plan of the report.

1.1 General context and issues

Present the host company's sector of activity, the major challenges related to artificial intelligence or data science in this context, and the motivation for the project.

1.2 Problem statement and objectives

Clearly state the research question or operational challenge being addressed. List the SMART objectives of the project.

1.3 Report Outline

Briefly describe the content of each chapter to guide the reader.

2. State of the art

Recommended length: 10–15 pages. Critical review of academic literature and existing solutions. Cite all sources according to IEEE or APA style (see Bibliography section).

2.1 Theoretical Foundations

Present the relevant concepts, models, and theories. E.g.: supervised learning, deep neural networks, transformers, etc.

2.2 Related work

Analyze existing approaches in the literature and industrial solutions (benchmarks, public datasets, libraries).

2.3 Project Positioning

Identify the gaps filled by your work and justify your methodological choices.

3. Mission context and contributions

Recommended length: 5–8 pages. Introduce the company, the team, and your specific role.

3.1 Company and team presentation

Describe the organization, its size, its data/AI strategy, and the host department.

3.2 Scope of the mission

Clearly define the tasks assigned to you, the schedule, and the expected deliverables.

3.3 Data and constraints

Describe the available data (volume, format, quality), GDPR/legal constraints, technical and budgetary constraints.

4. Methodology and technical approach

Recommended length: 15–20 pages. This is the scientific core of the report. Describe each step in a reproducible manner.

4.1 General Solution Architecture

Present the overall pipeline (a diagram is strongly recommended). Justify each functional block.

4.1.1 Data Collection and Ingestion

Data sources, formats, update frequency, extraction scripts (ETL/ELT).

4.1.2 Preprocessing and feature engineering

Cleaning, normalization, encoding, variable creation, training/validation/test split. Specify the libraries used (pandas, scikit-learn, etc.).

4.2 Modeling

Describe the models or algorithms used, the hyperparameters, the regularization strategies, the architectural choices (e.g., number of layers, attention heads, etc.).

4.3 Training and infrastructure

Describe the environment (cloud, GPU, MLOps), the frameworks (PyTorch, TensorFlow, HuggingFace), the training time and the associated costs.

4.4 Evaluation and metrics

List the evaluation metrics (accuracy, F1, RMSE, AUC-ROC...), justify their relevance to the task.

5. Results and analysis

Recommended length: 10–15 pages. Present the results objectively, with numbered figures and tables.

5.1 Quantitative Results

Present the numerical performance in comparative tables (baselines vs. your approach). Each table must be numbered and labeled (Table 5.1 – ...).

Model	Accuracy (%)	F1-Score	AUC-ROC	Inference time (ms)
Baseline (Logistic Reg.)	72.4	0.71	0.78	2.1
Random Forest	81.3	0.80	0.87	5.4
XGBoost	84.7	0.83	0.90	6.2
Your model (Transformer)	89.1	0.88	0.94	18.7

Table 5.1 – Comparison of model performance on the test set (n = 10,000 samples).

5.2 Qualitative Results

Supplement with qualitative analyses: visualizations (learning curves, confusion matrices, attention maps, examples of predictions). Each figure must be numbered and labeled (Figure 5.1 – ...).

[Insert an illustrative figure here – e.g., ROC curve, confusion matrix, attention map]

Figure 5.1 – [Descriptive legend of the figure: explain what is represented, the axes, the unit, the source if external].

5.3 Discussion and critical analysis

Interpret the results in light of the problem. Identify the strengths and limitations of your approach. Discuss potential biases, generalizability, and practical implications.

6. Conclusion and outlook

Recommended length : 3–5 pages.

6.1 Summary of contributions

Summarize the main scientific and operational contributions of the project. Compare them to the initial objectives.

6.2 Limitations and areas for improvement

Mention the identified limitations (data, time, budget, infrastructure) and areas for improvement.

6.3 Perspectives

Propose future work: new data, alternative architectures, production deployment, societal or ethical impact of the solution.

Bibliography

Use the IEEE style for academic publications or APA 7th edition. References must be numbered and listed in order of appearance in the text (IEEE) or alphabetically by author (APA). A minimum of 20 references is required for a PGE5 final year project.

IEEE format (recommended for AI/Data work):

- [1] A. Vaswani, N. Shazeer, N. Parmar et al., “Attention Is All You Need,” in Advances in Neural Information Processing Systems, vol. 30, 2017.
- [2] Y. LeCun, Y. Bengio and G. Hinton, “Deep learning,” Nature, vol. 521, pp. 436–444, May 2015.
- [3] Author(s), “Title of article,” Name of journal/conference, vol. xx, no. xx, pp. xx–xx, Year.

APA format 7th edition (alternative):

Vaswani, A., Shazeer, N., Parmar, N., Uszkoreit, J., Jones, L., Gomez, AN, Kaiser, Ł., & Polosukhin, I. (2017). Attention is all you need. Advances in Neural Information Processing Systems, 30.

Appendices

The appendices contain supplementary material: source code (significant extracts), configurations, additional analyses, and raw data. Do not include any content essential to understanding the report.

Appendix A – Code Extracts

Insert the most significant code snippets here, with comments. For the complete code, provide a link to the Git repository.

Annex B – Additional Data

Additional results tables, descriptive statistics, data examples.

Annex C – Technical Environment

Library versions, hardware configuration (GPU, RAM), installation commands (requirements.txt or environment.yml).
